Re: HMDC 1-E Facility Number No.0907W, Use of ID27  
Contaminated Material as Daily Cover

Dear Mr. Marturano:

The Bureau of Landfill Engineering received a request from Mr. Andrew Confortini to allow the use of I.D. 27 classified material as cover at your landfill. The I.D.27 material in question consists of approximately 3,000 cubic yards of soil from the K. Hovanian-Newark Property, Newark, New Jersey.

A letter from the Division of Hazardous Waste Management indicates that this material is not classified as hazardous. This statement, however, represents an advisory opinion regarding the applicability of current New Jersey waste classification standards to a specific representative sample of the waste stream. Be advised that the Department has not examined or analyzed the contaminated soil material that you propose to accept.

After consideration of this matter, we have no objection to the proposal to utilize the material specified in Mr. Confortini's letter dated April 5, 1993 as daily cover. In the event that any or all of the contaminated material is unsuitable for use as cover in your landfill because of unacceptable chemical or physical properties, or if your cover needs change, the generator shall be responsible for proper disposal at an appropriately licensed disposal facility consistent with state waste flow requirements.

KHOV005457

If you have any further questions, please do not hesitate to contact Mr. John Edwards, of my staff, at (609) 530-8008.

Sincerely,

*S. Bhalla*
